SUMMARY

Front-end focused Software Engineering student at FAST-NUCES with six shipped, production-grade applications built in React, TypeScript, and Tailwind CSS. Proven ability to translate UI/UX wireframes into responsive, accessible, and performant interfaces while collaborating across the full stack via REST APIs and third-party services. Seeking a front-end engineering role to deliver high-quality, user-centric web applications.

EDUCATION

National University of Computer and Emerging Sciences (FAST-NUCES)
B.S. Software Engineering

Aug 2024 – Jun 2028
Faisalabad, Pakistan

TECHNICAL SKILLS

Languages: HTML5, CSS3, JavaScript (ES6+), TypeScript, Python, SQL, C, C++
Frameworks & Libraries: React, Vite, Next.js, Tailwind CSS, shadcn/ui, Framer Motion, React Hook Form, Zod, React Router, TanStack Query
Backend & API Integration: Node.js, Express.js, Flask, REST APIs, Google Apps Script, Google Sheets API
Auth & Storage: OAuth 2.0 (Google), Firebase Authentication, Cloudinary, Context API
Tools & Platforms: Git, GitHub, GitHub Pages, Vercel, Render, Responsive Design, Cross-Browser Testing

EXPERIENCE

Web Development Intern | Enigmatix Global, Bahawalpur

Jun 2024 – Aug 2024

- Translated design mockups into responsive, cross-device UI components for a live client-facing product, improving visual consistency across multiple breakpoints.
- Participated in code reviews and followed professional Git branching and PR workflows within a multi-developer team throughout a 3-month engagement.

PROJECTS

FPS Photobooth · React, Vite, Express.js, Firebase Auth, Cloudinary, Vercel

Link

- Full-stack photo portal translating a clear UX requirement — instant photo retrieval — into a responsive, domain-restricted interface authenticated via Google OAuth and Firebase.
- Designed an admin panel with drag-and-drop batch upload, per-student search, update, and delete, integrating an Express.js REST API and Cloudinary for persistent cloud storage.

Student Marks Portal · React, Vite, Google Apps Script, Google Sheets API, OAuth 2.0

Link

- Implemented a schema-less dynamic marks grid that auto-renders new Google Sheets columns without code changes — ensuring zero-maintenance, spec-faithful UI updates for faculty.
- Enforced domain-restricted OAuth 2.0 at both the React frontend and Google Apps Script backend, providing secure, collaborative integration between design intent and API layer.

PDS — Plagiarism Detection System · Python, Flask, difflib, thefuzz, openpyxl

Link

- Built a drag-and-drop local web interface handling up to 100 PDF/DOCX submissions per run, with real-time progress feedback and a clean, accessible single-page layout.
- Engineered a two-metric similarity engine with language-aware preprocessing, outputting timestamped, colour-coded Excel reports — translating complex backend logic into actionable UI.

UI Design Projects

Campus Go · React, TypeScript, Vite, Tailwind CSS, shadcn/ui, React Router, TanStack Query, React Hook Form, Zod

Link

- Translated a school-transport service wireframe into a fully responsive, multi-section landing app (hero, services, testimonials, contact) with dark mode and smooth Framer Motion animations.
- Implemented type-safe forms with React Hook Form and Zod, TanStack Query for server state, and shadcn/ui components — achieving a TypeScript-dominant (97.3%) codebase.

MDBR Nursery · React, Vite, Tailwind CSS, Framer Motion, Context API, React Router

Link

- Delivered an e-commerce frontend with category filtering, keyword search, multi-sort, and an animated sidebar cart — optimised to a 96/100 mobile Lighthouse performance score.
- Applied responsive design principles and Context API state management to ensure a consistent, cross-browser UX across all device sizes.
